| Polling current | 120 mA | Sensing face material | PBTP |
| Short-circuit protection | ✓ | Housing material | Stainless steel |
| Voltage reversal protection | ✓ | Connector type / Cable length | USB A male / 2 m |
| Max. output current | | Weight (incl. nuts) | 97 g |

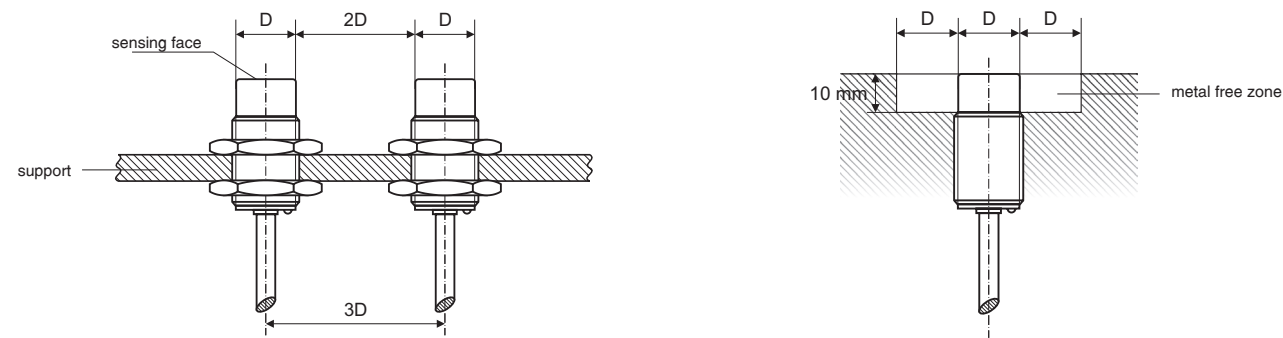

** Read/write operations possible

*** Data retention and mechanical stability limit

MOUNTING RECOMMENDATIONS

CLEARANCE

Read/write modules must not mutually influence each other. For this reason, a minimum distance of 2 x D between the devices must be observed.

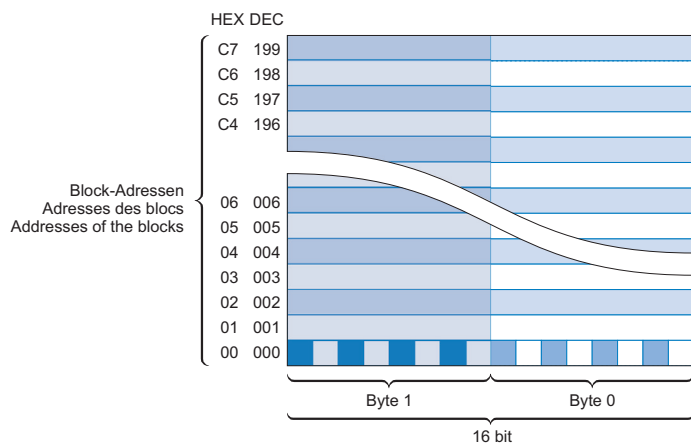

COMMUNICATION SETTINGS

| USB/VCP characteristics | Value for RLS-1181-220-120 |
|--------------------------------------|----------------------------|
| Data transfer rate (default in bold) | 115 200 |
| Number of bits | 8 |
| Number of stop bits | 1 |
| Parity | No |

MEMORY STRUCTURE OF THE READ/WRITE MODULE

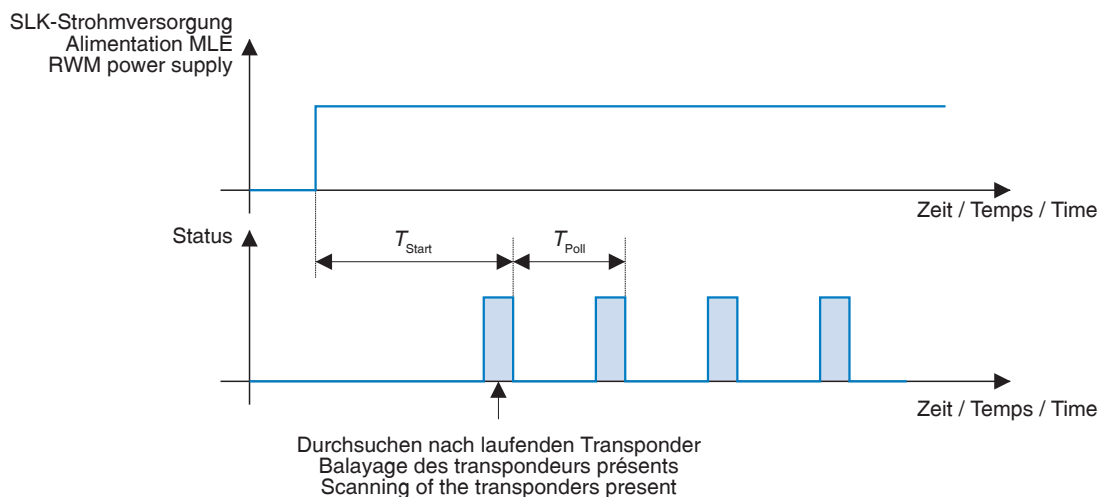

The Read/Write Module has a user memory of 3200 bits organized in 200 blocks of 16 bits. Each block is addressable separately by means of the commands Write RWM and Read RWM.

TYPICAL TIMES

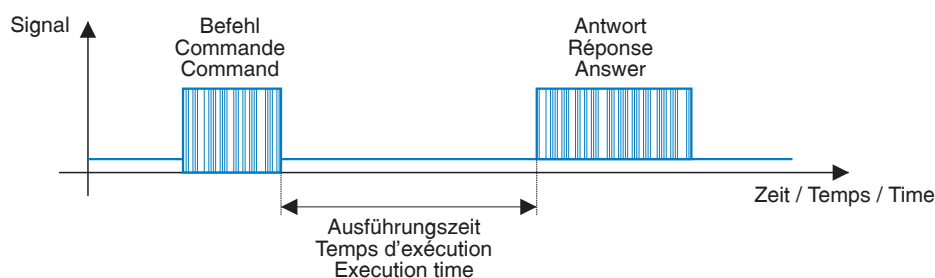

| Time name | Description | Value |
|--------------------------------|---|-------------------|
| Starting times | Time between the powering of the RWM and the end of the first scanning of the transponders present | 300 ms |
| Polling time | Time for actualization of the list of the transponders present. This time depends on the number of collisions. | 70* ms |
| Execution time of the commands | The execution time is defined as the time between the end of the sending of the command and the beginning of the answer | Command dependent |

*Polling time for 16 transponders without collision

TYPICAL EXECUTION TIMES BY COMMAND TYPE

| Command type | Description | | Value |
|---|---|---|---------|
| Commands related to RWM | Typical execution time | | 1.5 ms |
| Commands related to Transponder depending on number of blocks | Typical read duration: $T_R = T_0 + N \cdot T_{R0}$ Typical write duration: $T_W = T_0 + N \cdot T_{W0}$ | Duration for decoding the command - T_0 | 12.0 ms |
| | | Read duration for one block (32 bits) - T_{R0} | 8.0 ms |
| | | Write duration for one block (32 bits) - T_{W0} | 12.0 ms |
| | | Number of blocks concerned - N | |
| Commands related to Transponder not related to a number of blocks | Typical execution time (e.g. Get System Info, Write AFI, Lock AFI, Write DSFID, Lock DSFID, and so on) | | 30 ms |

DISCLAIMERS

FCC information

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

IC information

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) This device may not cause interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- (1) L'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.
